

Industry one-pager • Smart manufacturing

Sales lead fast response · human confirmation loop · verifiable pilot metrics

Case summary · anonymized · for internal forwarding · Version 2026-07-30

Confidence note: Metrics below are from a verified pilot (desensitized). No win-rate or revenue guarantees.

1. Customer background & pain

Precision parts manufacturer (~800 employees). ~40 new CRM leads per day. High-value leads often first contacted after 2–3 hours — competitors already engaged.

Sales wanted faster first response without losing ownership or sounding robotic on calls.

2. What changed

First pilot: fully automatic outbound calling. After 4 weeks, sales pushed back (uncontrollable scripts, poor experience, unclear attribution) and IT raised compliance concerns — pilot paused.

Adjusted design: agent drafts follow-up copy from the lead profile; sales review and confirm before send. New leads get a suggestion within ~30 minutes of CRM entry.

3. Architecture (human-in-the-loop)

CRM lead intake → intent / profile enrichment → draft message → human confirm → send via approved channels.

System linkage plus human confirmation before send — matches BlockHub CapShip dual-end delivery for web and mobile.

4. Pilot results (verified)

200 desensitized real leads. Median first response from ~3.2 hours to 28 minutes. Frontline adoption 72%.

Sales lead and IT signed off in writing; project moved to commercial approval.

5. Next steps for evaluators

Share this PDF with sales ops and IT. Pair with Trust Center security FAQ and integration checklist.
